

# Customize Your Web

Last Updated Wednesday, 12 May 2010

Latest version: Customize Your Web 0.4.2.4

**ATTENTION:** If you have installed the Addon "NoScript", you must allow JavaScript for this page to install Customize Your Web.

Customize Your Web (CYW) let's you customize your favorite websites with just a few clicks. All changes are done with an easy to use "WYSIWIG" editor (What you see is what you get).

CYW was selected as a runner up of Mozilla's Extend Firefox 3.5 competition!

Watch the following video to get an impression what you can do with Customize Your Web. It's a lot!

More Videos can be found here...

{mosmodule video=http://www.youtube.com/v/gHOzLyNgldU&ap=%2526fmt%3D22, 854, 505}

The basic principle is as follows: If you want to customize a website you open the edit mode and create a "script" consisting of a series of actions and a definition for which site the script should be applied. The script with its actions is then executed after every load of the website. Everything is done in a visual editor.

The scripts can be edited and modified at any time by just toggling again into the edit mode.

Customization capabilities includes

- Removal and rearrangement of elements (cut / copy / paste behavior)
- Modifying of elements in every possible way (changing size, color, default values ect.)
- Definition of shortcuts / shortstrings for any clickable element (shortstrings are multi-character shortcuts, e.g. "SO" for a "Sign out" Button)
- Keyboard navigation support for any list of elements (e.g. the result entries of search)
- Insertion of arbitrary HTML and JavaScript code (of course for this you need some programming knowledge)
- Definition of small macros which are triggered by shortcut
- Automatically triggering actions on page load (e.g. for automatic click on a login button or focusing a special field)

I'am looking for volunteers helping me testing new versions of CYW. Please send an email to [cyw@mouseless.de](mailto:cyw@mouseless.de) and I will notify you if a new version is available.

Latest Build:

Version 0.5Build20100115
